VOLUME LXXI.

ALEXANDRIA VA FRIDAY EVENING, MARCH 11, 1870.

NUMBER 61.

ALEXANDRIA GAZETTE  
AND VIRGINIA ADVERTISER  
PUBLISHED DAILY BY  
EDGAR SNOWDEN.  
OFFICE—GAZETTE BUILDING, 70 PRINCE ST.

TERMS OF SUBSCRIPTION—IN ADVANCE.  
One year \$3.00  
Six months 2 00  
Three months 1 00  
One month 0 75

ALEXANDRIA GAZETTE  
AND VIRGINIA ADVERTISER  
(For the Country.)  
Is published regularly on TUESDAYS,  
THURSDAYS and SATURDAYS, at \$6 per  
annum—payable in advance.

Transient advertisements inserted at  
former rates, viz: \$1 for the first insertion of  
one square, of eight lines or less, and twenty-  
five cents for each subsequent insertion.  
Marriage and Death Notices 50c. Obitu-  
aries will be charged at advertisement rates, for  
notices over four lines.

Special Notices or City Items 15c. per  
line for the first insertion, and eight cents per  
line for each subsequent insertion.

“BURNERS.—There is no part connected  
with the consumption of gas whereby the best  
results are obtained in the quality of light and  
economy of gas of more importance than the  
burners. It would be difficult to convince the  
majority of gas consumers, who have not given  
the subject attention, how remarkably the light  
from gas is reduced by those improperly con-  
structed, or where the pressure or the flames  
are unsuitably adjusted. Owing to these cir-  
cumstances, the amount of gas consumed is  
disproportionate to the light obtained, and the  
account of the consumer is much increased. In  
fact, there is no exaggeration in stating that a  
large proportion of the consumers, through  
their own mismanagement, pay twice as much  
as there is any occasion for, considering the  
amount of light obtained, all of which could be  
adjusted and controlled of the pressure.

“The important requisites for good burners  
are, that unless where the gas issues should  
be perfectly regular in size, to permit it to issue  
with very low pressure; and these conditions  
should be adhered to, whatever the kind the  
burner may be, whether the argand, bat-wing,  
fish-tail, or single jet. If the orifices are too  
small, a high pressure is required to expel the  
gas, and the light is diminished just in pro-  
portion to the increased pressure. In such burn-  
ers the flame will have a bluish tinge, and the  
lower part will be of a deep color, giving but  
little light in proportion to the gas consumed.  
As an example, an argand of fifteen holes,  
passing five feet of gas at one tenth pressure,  
yielding a light of twelve candles, will, if the  
orifices are reduced to pass the same amount  
of gas per hour at five-tenths pressure, only  
give the light of six candles, a loss of thirty per  
cent. Hence, we see that the light to be ob-  
tained from a given quantity and quality of  
gas is entirely dependent on the burner employ-  
ed. This demonstrates the necessity of having  
proper burners, and shows clearly how, by neg-  
ligence on this point, the consumer may find  
his gas bills increase in what appears to him a  
very mysterious manner.

“SIZE OF FLAME.—It is a mistake to sup-  
pose that the amount of light obtained will be  
in proportion to the quantity of gas issuing  
from a burner. There is a particular point in  
the consumption of any class of burners where  
the maximum of light is derived, and any  
deviation from this entails loss. As an exam-  
ple, if an argand burner consumes five feet per  
hour, giving the light of twelve candles, be re-  
duced so that only three-fourths of that quan-  
tity is burned, then the light, instead of being  
equal to nine candles, the theoretical propor-  
tion, will be six candles only, being a positive  
loss of thirty-six per cent. This reduction may  
be continued with even greater proportionate  
loss.

A five feet bat-wing or fish tail burner will  
give a maximum light in proportion to the gas  
consumed, compared with any less sized burn-  
er, and it will be found in practice the larger  
sized burners are the most economical, the  
largest giving as high as 200 to 300 per  
cent. advantage in light, as compared with  
the smallest sizes. As an example, a bat-wing  
burner, consuming two feet per hour, gives  
the light of two and a quarter candles only,  
while a burner consuming seven and a half feet  
per hour, gives the light of twenty-two candles,  
the pressure being uniformly four tenths of  
an inch.

“It is more economical to have one good,  
large gaslight than several smaller ones.

“GLOBES, GLASSES, &c.—Although globes  
and globes are essential to argand burners,  
and globes are in many places where fish tail  
burners are used, and the ornamental effect is  
pleasant, still they are detrimental to the  
diffusion of the light of gas. A clean glass  
globe obstructs about twelve per cent.; a clean  
globe, engraved with flowers, about twenty-four  
per cent.; a globe ground all over about forty  
per cent.; an opal globe, about sixty per cent.  
Hence is apparent the folly of using elaborately  
engraved and ground globes or shades, where  
it is desirable to economize. If engraved at all,  
the upper portion should be embellished, while  
the lower part should be left clear for the free  
passage of light.

An ice merchant in Greenwich, Conn., who  
had been watching his pond all winter with al-  
most prayerful interest in hopes of a freeze,  
visited it recently after a sharp, cold night,  
stepped on the ice, and finding that it would  
bear him, exclaimed, “Thank God!” Going  
further, he stepped on the ice, and exclaimed  
truly, “Thank God!” But on venturing  
a little further, and going through up to his  
neck, he ejaculated, louder and heartier than  
ever, “D—n the ice!”

During the session of a Woman's Suffrage in  
a town in Vermont, a small boy was found in  
tears and trouble in Main street of the city  
where the Convention was assembled. “What's  
the matter?” asked a sympathizing and cari-  
ous passer-by. Rubbing his eyes vigorously  
with both fists, after the manner of small boys,  
he blubbered out: “My mother's gone to the  
woman's town meeting, and didn't leave me  
out nothing to eat!”

The Ku Klux are in Washington. At least  
Gov. Bullock has received a letter signed  
“Brutus,” in which he is advised to cut off  
his dogs from Georgia, and attend to his legiti-  
mate business. His carpet bag Excellency re-  
treats through Kentucky's Chronicle that he is not  
afraid of the Ku Klux.

During the fire scene in “Lost at Sea,” at  
the Opera House at Springfield, Mass., on  
Monday night, Mrs. Sedley Brown's clothing  
caught fire, and she would have been fatally  
burned but for the promptness of Shewell and  
Maeder, members of the company, who rushed  
on the stage and extinguished the flames. All  
three were painfully burned. Mrs. Brown  
was seriously burned about the face and should-  
ers, and will not be able to appear on the stage  
for a long time.

Since the 1st of January 5,067 colored per-  
sons from Virginia have passed over the Ten-  
nessee railroad, bound further south.

“The important requisites for good burners  
are, that unless where the gas issues should  
be perfectly regular in size, to permit it to issue  
with very low pressure; and these conditions  
should be adhered to, whatever the kind the  
burner may be, whether the argand, bat-wing,  
fish-tail, or single jet. If the orifices are too  
small, a high pressure is required to expel the  
gas, and the light is diminished just in pro-  
portion to the increased pressure. In such burn-  
ers the flame will have a bluish tinge, and the  
lower part will be of a deep color, giving but  
little light in proportion to the gas consumed.  
As an example, an argand of fifteen holes,  
passing five feet of gas at one tenth pressure,  
yielding a light of twelve candles, will, if the  
orifices are reduced to pass the same amount  
of gas per hour at five-tenths pressure, only  
give the light of six candles, a loss of thirty per  
cent. Hence, we see that the light to be ob-  
tained from a given quantity and quality of  
gas is entirely dependent on the burner employ-  
ed. This demonstrates the necessity of having  
proper burners, and shows clearly how, by neg-  
ligence on this point, the consumer may find  
his gas bills increase in what appears to him a  
very mysterious manner.
